International & Domestic NFS V10.0.3 for ConvexOS V10.1

June 1992

Document No. 710-003430-041

This patch obsoletes the V10.0, V10.0.1 and V10.0.2 International and Domestic NFS releases. This patch includes these previous releases and a new rpc.lockd that should be used with ConvexOS V10.1. This new binary is part of the fix for PR-25707 where shared file locks cannot be acquired on files over NFS. The complete fix consists of ConvexOS V10.1 and either International or Domestic NFS V10.0.3. If ConvexOS V10.1 is used with a previous version of NFS, indeterminate results may occur.
