CONVEX VMEbus Doc Kit

Document No. 081-008630-000

The following information pertains to only those customers who have the existing documentation kit for VMEbus products.

Because of the growing number of controller hardware products CONVEX is shipping, a problem has developed in the shipping/receipt of the controller documentation. VME controller guides are included in the doc kit that ships when a customer orders a VIOP and are not necessarily shipped when a controller is shipped. It has happened that controller boards have been received without a service guide.

We have restructured the VMEbus doc kit to address this issue and ensure that the documentation is shipped with the controller hardware. To guarantee that everyone has up-to-date versions of the existing documentation, this shipment includes the latest version of all existing controller service guides, the binder, and the spine label. Specifically, the accompanying documents are

CONVEX VIOP/VBCU Svc Guide V1.1
CONVEX VME SMD Disk Controller Svc Guide V1.0
CONVEX VME ESDI Disk Controller Svc Guide V2.0
CONVEX VMEbus Ethernet Controller Svc Guide V1.0 and Addendum V1.1
CONVEX VMEbus Tape Controller Svc Guide V1.0
CONVEX VMEbus UltraNet Interface Svc Guide V1.0
CONVEX VMEbus SCSI Host Adapter Svc Guide V1.0
CONVEX Documentation Catalog V4.0

This shipment represents the new version of the VME doc kit and replaces all existing VME documentation. In the future, controller documentation will ship with the controller, not the device. The binder and the *VIOP/VBCU Service Guide* will ship with the VIOP chassis.

Future documentation revisions will be shipped to customers that have both the hardware and a hardware maintenance agreement.
